

Handbuch Docker

Repository klonen und Docker Image bauen

```
git clone https://github.com/jubra97/speedos.git
cd speedos
docker build -t speedosagent .
```

Alternativ: Pre-built Image laden

```
docker pull ghcr.io/luk-ha/liveagent:latest
docker tag ghcr.io/luk-ha/liveagent:latest speedosagent
```

Docker Container starten

```
docker run -e URL="wss://msoll.de/spe_ed" -e KEY="<Your API key>" -e TIME_URL="https://msoll.de/spe_ed_time" speedosagent
```
